Global Development Dashboard

Global health, population and economic trends, 1952-2007

Name: Mehwish Naseeruddin
Tool: Tableau Desktop
Date: October 2026

1. Problem Statement

The stakeholder problem and the decision this dashboard supports

Stakeholder / Organisation

Development analytics team and its leadership

Business / Policy Question

Which regions and countries need deeper policy review?

Expected Action

Focus review on the High Priority contexts the evidence identifies

- Life expectancy rose everywhere from 1952 to 2007, but progress is uneven across regions
- Africa has the lowest life expectancy (54.8 years in 2007) and 24 of 25 High Priority countries
- Asia holds 61% of the population analysed, so it has the largest planning impact
- Objective: an interactive Tableau dashboard to compare regions, spot priority countries and back recommendations with exact numbers

2. Dataset Overview

Source, structure and data cleaning summary

Dataset profile

6,856 raw rows → 6,816 clean rows, 15 columns

142 countries, 12 years (1952-2007, every 5 years), 4 indicators

Source: Gapminder via Plotly - gapminder.org/data

Cleaning summary

40 duplicates removed (differ only in record_id and source_note)

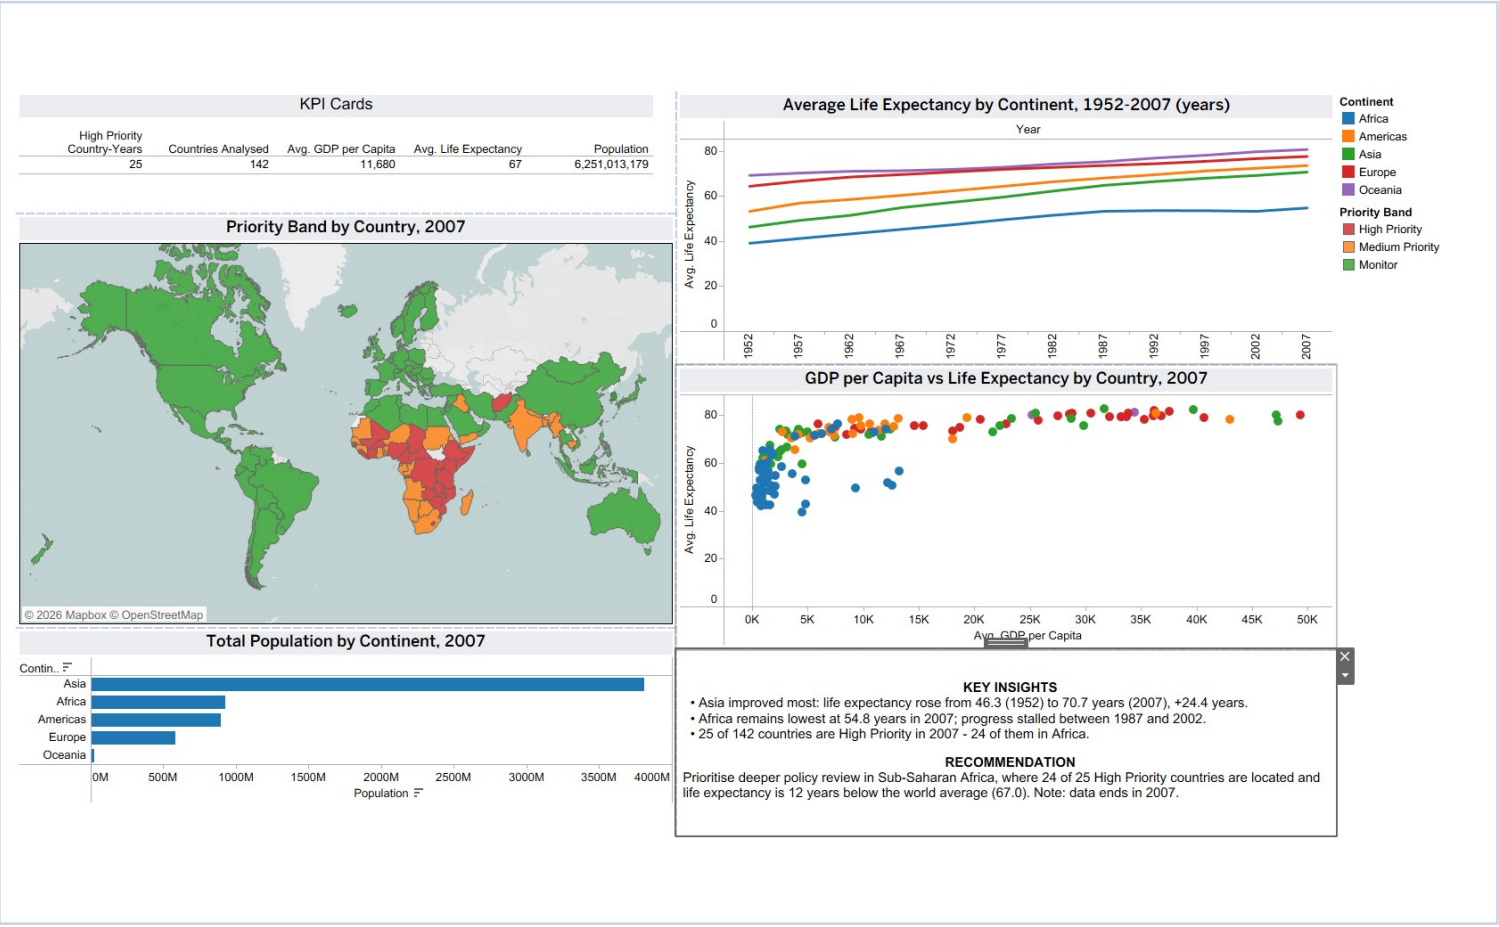

35 missing values (0.5%) left blank; 55 income blanks = 'Not recorded'

TRIM + PROPER on country, continent, income and priority labels

Field used	Type / role	Used for
Country, Continent (cleaned)	Text dimension	Filters, colour, ranking
Year	Discrete dimension	Trend axis, year filter
Iso Alpha	Geographic role: Country	Map
Indicator Code / Name	Text dimension	KPI logic, indicator dropdown
Indicator Value	Decimal measure	All KPIs and charts
Priority Band (cleaned)	Text dimension	Map colour, filter, highlight

3. Dashboard Page 1: Executive Summary

Leadership view: KPIs, trend, priority map and population scale

Top Evidence

Avg life expectancy 2007: 67.0 yrs

Population 2007: 6.25 bn

High Priority countries: 25 of 142

Interpretation

Asia gained most: 46.3 → 70.7 yrs (+24.4).

Africa is lowest at 54.8 yrs and holds 24 of the 25 High Priority countries.

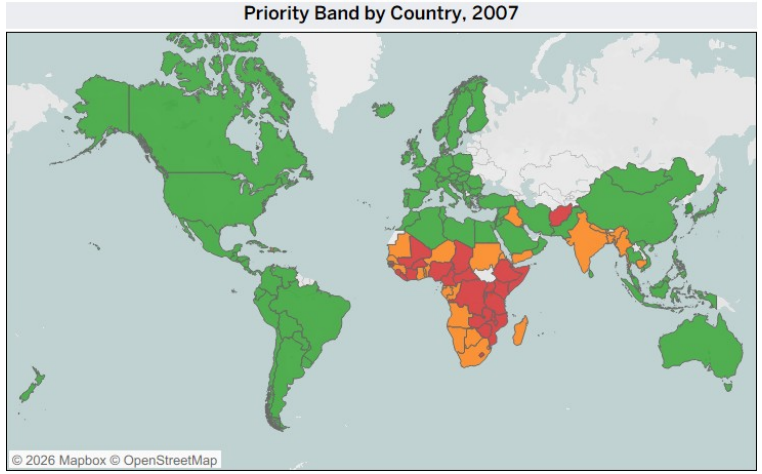

4. Key Insights

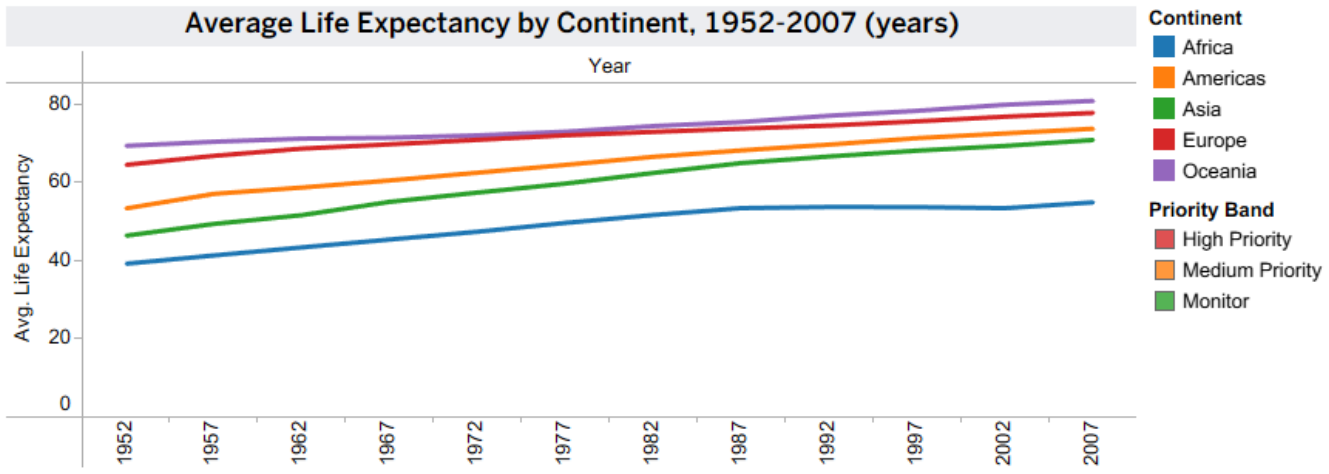

Findings backed by exact dashboard numbers

Trend: Asia's life expectancy rose 24.4 years (46.3 in 1952 to 70.7 in 2007), the biggest gain

Comparison: Africa 54.8 yrs vs Europe 77.6 yrs in 2007; Africa stalled at 53.3 yrs from 1987 to 2002

Priority: 25 High Priority countries in 2007 (down from 79 in 1952); 24 are in Africa

5. Recommendations

Evidence-based guidance for leadership

1. Prioritise Sub-Saharan Africa for review

Evidence: 24 of 25 High Priority countries (priority map + KPI cards)

2. Investigate Africa's 1987-2002 stall

Evidence: Africa line flat at ~53 yrs for 15 years (trend chart)

3. Look beyond income

Evidence: Botswana $12,570 GDP pc but 50.7 yrs (GDP vs LE scatter)

Limitations: data ends in 2007; 5-year snapshots; 35 missing values; priority bands are derived training labels; North and South Korea share ISO code KOR on the map.

6. Conclusion

The decision and next steps

Decision: start deeper policy review in Sub-Saharan Africa - lowest life expectancy (54.8 yrs) and 24 of 25 High Priority countries.

With more time / better data: add current data (after 2007), more health indicators (e.g. child mortality), population-weighted averages and correct ISO codes.

Thank you
